CEMACON has completed an important stage in the development of the project "Investing in a new, eco-friendly ceramic coating production line", a project co-financed under the EEA Financial Mechanism 2014-2021, under contract 2020547221, concluded with the program operator Innovation Norway - a Norwegian organization with over 20 years of experience in international projects for the development of good practices in the field of eco-business.

With the signing of the contract for the supply of equipment related to the production line with SACMI IMOLA SC, the global leader in the field of equipment and installations used in the fired ceramic building materials industry, we have the certainty that we will implement for the first time in Romania a sophisticated, intelligent technology. It will simultaneously generate the highest quality and increased energy efficiency.

The new factory, which CEMACON will build in Sălaj County, will be a new landmark in industrial production, both in terms of operational efficiency and in terms of quality standards. Work for employees. The equipment purchased is the top of the range in the industry at the moment and stands out for its reliability and versatility, the production line being equipped to produce both ceramic cladding and cladding elements for facades.

The investment, which will exceed 12 million euros, is part of our promise to produce innovation, to prove that we are pioneers on the Romanian market and we are convinced that it will be a pleasant surprise for all those who want more style or personality from their homes.

It is also important to mention that it will be an environmentally friendly production

process, we are talking about continuous greening and the transformation of activities on the principles of Lean production. Our long-term development strategy is geared towards environmental protection in production and energy efficiency in use.

Daniel Sologon

Chairman of the Board
